## **Donnan prediction**

**Figure 1:** The compression of hydrogel affects the ionic composition of supernatant

- Donnan equilibrium  $c_s^2 = c_{Na}^{in} \cdot c_{Cl}^{in}$
- Electroneutrality  $\alpha N$  of self charges  $\alpha N$  of neutralizing counterions  $c_{Cl}^{in}$  of free ion pairs
- By compression to the dry state one can exclude brine of concentration

$$N_{ ext{excl}}/V = egin{cases} c_s^{ ext{in}} < c_s, \ \\ c_s^{ ext{in}} + lpha N/V_{ ext{gel}} > c_s, \end{cases}$$
