Mean field thory. Donnan potential.

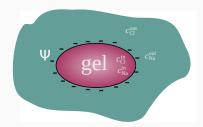

Figure 2: Electrostatic potentioal of the particle surface is a driving force of ion partitioning

ullet Donnan electrostatic potential, ψ

$$\mathrm{e}^{\psi} = \xi = \frac{c_{\mathrm{H}^+}^{out}}{c_{\mathrm{H}^+}^{in}} = \frac{c_{\mathrm{Na}^+}^{out}}{c_{\mathrm{Na}^+}^{in}} = \frac{c_{\mathrm{Cl}^-}^{in}}{c_{\mathrm{Cl}^-}^{out}} = \frac{c_{\mathrm{OH}^-}^{in}}{c_{\mathrm{OH}^-}^{out}}$$

Local electroneutrality condition

$$\alpha c_p + c_{\text{Cl}^-}^{in} + c_{\text{OH}^-}^{in} = c_{\text{Na}^+}^{in} + c_{\text{H}^+}^{in}$$

$$\left| \xi(c_{\mathrm{p}}, c_{\mathrm{s}}) = \sqrt{1 + \left(rac{lpha c_{\mathrm{p}}}{2 c_{\mathrm{s}}}
ight)^2} \pm rac{lpha c_{\mathrm{p}}}{2 c_{\mathrm{s}}}
ight|$$
